

GEMS

In a math problem with more than one operation, you must follow the correct order of operations to arrive at the correct answer.

GEMS

- First Grouping symbols
- Then Exponents
- Then Multiplication or division
- Then Subtraction or addition

Use the space below and the correct order of operations to solve the problem.

$$4 + 6 \times 3 - 4 \div 1 + 2 \times 3 - (7 + 2) - 2 \times 3 - 9 \div 3 + 2 = \underline{\hspace{2cm}}$$
