

Final Exam review Term 3 Chapter 7

Solve by Graphing:

1. $y = x + 4$

$y = 4x + 1$

(1,5)

2. $y = 1$

$y = x$

(1,1)

3. $y = \frac{1}{2}x + 1$

$y = -3x + 8$

(2,2)

Without graphing, tell whether the system has *one solution*, *no solution*, or *infinitely many solutions*. Hint: make sure the equations are in $y = mx + b$ form.

4. $y = -3x + 7$

$y = -3x - 4$

Solution: no sol. -
parallel

5. $x + y = 4$ $y = -x + 4$

$2x + 2y = 8$

$x + y = 4$

$y = -x + 4$

Solution: inf. many -
same line

6. $y = 2x + 1$

$2x + y = -8$

$y = -2x - 8$

Solution: one sol.

Solve each system using any method and circle your answer.

7. $y = 6x - 4$

$y = -2x + 28$

$$y = 6(4) - 4$$

$$y = 24 - 4$$

$y = 20$

$6x - 4 = -2x + 28$

$$\frac{8x}{8} = \frac{32}{8} \quad \boxed{x=4}$$

(4,20)

8. $m = 4n + 11$

$-6n + 8m = 36$

$m = 4(-2) + 11$

$m = 3$

(3, -2)

$-6n + 8(4n + 11) = 36$

$-6n + 32n + 88 = 36$

$$\frac{26n}{26} = \frac{-52}{26}$$

$n = -2$

$$9. 2x + 5y = 17$$

$$6x - 5y = -9$$

$$\frac{8x}{8} = \frac{8}{8} \quad \boxed{x=1}$$

$$2(1) + 5y = 17 \quad (1, 3)$$

$$\frac{5y}{5} = \frac{15}{5} \quad \boxed{y=3}$$

$$11. y = 2x$$

$$y = x - 1 \quad \begin{matrix} 2x = x - 1 \\ \boxed{x=-1} \end{matrix}$$

$$y = 2(-1)$$

$$\boxed{y=-2}$$

$$(-1, -2)$$

$$10. 2x - 3y = 61 \quad 2x - 3y = 61$$

$$-1(2x + y = -7) \quad -2x - y = 7$$

$$\frac{-4y}{4} = \frac{68}{4}$$

$$2x + 17 = -7$$

$$\frac{2x}{2} = \frac{-24}{2}$$

$$\boxed{x=-12}$$

$$\boxed{y=17}$$

$$(-12, 17)$$

$$12. \begin{matrix} 4 \\ 12 \end{matrix} (3x - 10y = -25) \quad 12x - 40y = -100$$

$$4x + 40y = 20$$

$$4x + 40y = 20$$

$$\begin{matrix} 4(-5) + 40y \\ -20 \end{matrix} = 20$$

$$\frac{40y}{40} = \frac{40}{40}$$

$$\boxed{y=1}$$

$$\frac{16x}{16} = \frac{-80}{16}$$

$$\boxed{x=-5}$$

$$(-5, 1)$$

Write a system of equations and solve the following problems:

13. The sum of two numbers is 20. Their difference is 4. Find the two numbers.

$$x + y = 20$$

$$x - y = 4$$

$$2x = 24$$

$$\boxed{x=12}$$

$$12 + y = 20$$

$$\boxed{y=8}$$

14. Suppose you invest \$12,000 in equipment to manufacture a new board game. Each game costs \$2.50 to manufacture and sells for \$18.00. How many games must you sell for your business to break even?

$$12000 + 2.50x = 18x$$

$$\frac{12000}{15.50} = \frac{15.50x}{15.50}$$

$$774.19 \text{ so } \boxed{775 \text{ games}}$$

15. The math and science club had fundraisers to buy supplies. The math club spent \$135 buying six cases of juice and one case of bottled water. The science club spent \$110 buying four cases of juice and two cases of bottled water. How much did each case of juice and each case of water cost?

$$\begin{array}{l}
 \text{math} - 2(6j + w = 135) \quad -12j - 2w = -270 \\
 \text{sci} \quad 4j + 2w = 110 \quad 4j + 2w = 110 \\
 \hline
 -8j \quad = -160 \\
 -8 \quad -8
 \end{array}$$

$$\begin{array}{l}
 6(20) + w = 135 \\
 120 \quad \boxed{w = \$15/\text{case}}
 \end{array}$$

$$\boxed{\text{juice: } \$20/\text{case}}$$

16. For making a payment, Marie used dimes and quarters only. The payment was for a total of \$1.65, and Marie used a total of 9 coins. How many dimes and quarters did she have?

$$\begin{array}{l}
 -10(d + q = 9) \\
 100(.10d + .25q = 1.65) \\
 10d + 25q = 165
 \end{array}$$

$$\begin{array}{r}
 -10d - 10q = -90 \\
 10d + 25q = 165 \\
 \hline
 15q = 75 \\
 15 \quad 15
 \end{array}$$

$$\begin{array}{l}
 \boxed{q = 5} \\
 \boxed{d = 4}
 \end{array}$$

17. At the football game, the ratio of boys to girls is 5 to 3. There are 104 total people at the game. How many of each gender are at the game?

$$\begin{array}{l}
 5x + 3x = 104 \\
 8x = 104 \\
 x = 13
 \end{array}$$

$$\begin{array}{l}
 \boxed{\text{boys} = 5(13) = 65} \\
 \boxed{\text{girls} = 3(13) = 39}
 \end{array}$$

18. The perimeter of a rectangle is 114 ft. Its length is three more than twice its width. Find the dimensions of the rectangle.

$$\begin{array}{r}
 6w + 6 = 114 \\
 -6 \quad -6 \\
 \hline
 6w = 108 \\
 6 \quad 6 \\
 \hline
 \boxed{w = 18}
 \end{array}$$

$$\boxed{l = 2(18) + 3 = 39}$$
